

Custom Office

Custom Office is a lens designed primarily for presbyopes who work for extended periods of time on tasks requiring intermediate or near vision. These could be computer users, office workers, carpenters, plumbers, painters, mechanics, musicians or artists.

It is not a traditional progressive design, but rather is an alternative to a reading lens, providing clear vision for reading and intermediate viewing. The wide range of dynamic powers allows the ideal choice to be made for all reading additions up to 3.00D and also allows the user to benefit from fully corrected reading and intermediate vision and maximised distance vision. The design reduces eye and neck strain associated with long term use of intermediate or near vision.

- A superior design of office progressive lens
- Low distortion, soft design
- 8 Dynamic powers available

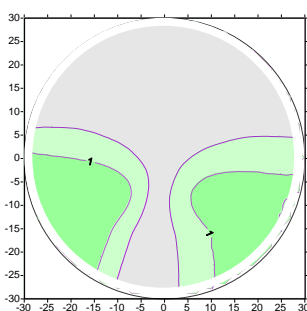

Custom Driver

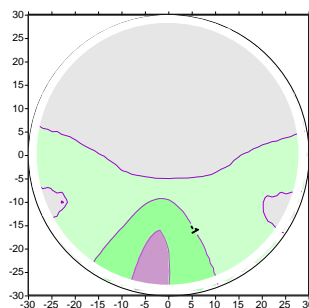

The **Custom Driver** has been designed for the presbyope with the specific vision requirements of driving in mind. Clear distance vision is the absolute priority with improved middle distance vision compared to other progressive designs for reading the dashboard and seeing in mirrors.

- Wide clear distance area
- Wide clear corridor
- Low unwanted astigmatism
- Individual designs for left and right eyes
